Hydraulic System Checks: Fluid leaks or air in the hydraulic clutch system can impair operation. Regular bleeding and fluid replacement are recommended.

Transmission Fluid

Fluid Type: Use Nissan-recommended transmission fluid, typically a GL-4 gear oil suitable for manual gearboxes.

Service Interval: Change the fluid approximately every 30,000 to 60,000 miles to maintain smooth shifting and prolong transmission life.

Shifter and Linkage Adjustment: Over time, linkage components may loosen or become misaligned, causing difficulty in selecting gears. Regular inspection and adjustment can prevent operational issues.

Lubrication: Proper lubrication of shifter components ensures smooth gear engagement.

Common Problems

Grinding Gears: Often caused by worn synchronizers, improper clutch engagement, or misadjusted linkage.

Clutch Slippage: Indication of worn clutch plates or hydraulic issues.

Difficulty Shifting: Could result from low transmission fluid, linkage misalignment, or internal gear wear.
