Sample Questions and Their Solutions from the November 2013 Memorandum

Question 1: Define demand elasticity and explain its significance in business decisions.

Answer: Demand elasticity measures how sensitive the quantity demanded of a good is to a change in its price. It is calculated as the percentage change in quantity demanded divided by the percentage change in price. Elastic demand (elasticity > 1) indicates that consumers are responsive to price changes, influencing businesses to consider pricing strategies carefully. Inelastic demand (elasticity < 1) suggests that price changes have little effect on quantity demanded, allowing firms to increase prices without significant loss in sales.

Question 2: Explain how government intervention can correct market failure caused by externalities.

Answer: Externalities occur when the social costs or benefits of an economic activity are not reflected in market prices. Government intervention can correct these failures through measures such as taxes (to internalize negative externalities like pollution), subsidies (for positive externalities like education), regulation, or establishing property rights. These actions help align private incentives with social welfare, leading to a more efficient allocation of resources.
