- 1. What are the primary functions of the skeletal system?**

Answer: The skeletal system performs several vital functions, including:

 - Providing structural support and shape to the body
 - Protecting internal organs (e.g., skull protecting the brain, ribs safeguarding the heart and lungs)
 - Facilitating movement by serving as attachment points for muscles
 - Producing blood cells within the bone marrow (hematopoiesis)

Answer: The muscular system enables movement through the contraction and relaxation of muscle fibers. Skeletal muscles, attached to bones via tendons, contract in response to neural stimuli, pulling on bones to produce voluntary movements. The process involves:

 - Neuromuscular communication via motor neurons
 - Sliding filament mechanism within muscle fibers (actin and myosin filaments)
 - Coordination among different muscle groups for smooth, controlled movements
- 3. What are the main parts of the nervous system, and what are their**

functions? Answer: The nervous system is divided into: Central Nervous System (CNS): Comprising the brain and spinal cord; processes information and coordinates responses. Peripheral Nervous System (PNS): Includes all nerves outside the CNS; transmits sensory information to the CNS and carries out motor commands. Autonomic Nervous System: Regulates involuntary functions like heart rate, digestion, and respiratory rate. Somatic Nervous System: Controls voluntary movements and reflexes.

4. Describe the pathway of blood flow through the heart. Answer: The circulation pathway involves: Deoxygenated blood enters the right atrium via the superior and inferior vena cavae. Blood flows through the tricuspid valve into the right ventricle. The right ventricle pumps blood through the pulmonary valve into the pulmonary arteries. Blood travels to the lungs for oxygenation. Oxygen-rich blood returns via pulmonary veins to the left atrium. Blood moves through the mitral (bicuspid) valve into the left ventricle. The left ventricle contracts, sending blood through the aortic valve into the aorta and systemic circulation.

5. What are the components of the respiratory system and their roles? Answer: Key components include: Nasal cavity and sinuses: Warms, moistens, and filters air. Pharynx and larynx: Conduct air and produce sound. Trachea and bronchi: Distribute air into the lungs. Lungs: Contain alveoli where gas exchange occurs.
